

Which joints in PS open: demand vs decompression moment

Longitudinal sway. E = 30 GPa, A = 38.52 m², I = 650 m⁴, deck 45 MN, PT 40 MN, spectrum S_DS = 1.0 g, S_D1 = 0.6 g·s, cap α = 1.3. Deck, PT, spectrum and α are placeholders. Elastic modes; the capped curve is a bound, not a nonlinear analysis.
